***Filing Solutions For The  
Graphics And Print Industries***

**W**hether you're involved in printing, graphic arts, advertising, architecture or engineering—the storage, filing and retrieval of artwork, negatives, plans and other similar materials is a major problem. Valuable materials can be damaged, misfiled, or even lost because of an inefficient filing and storage system.

Until now, most of these types of materials have been stored flat in drawers, in awkward storage bins, or piled on shelves. Although these methods may initially help, they provide little or no real organization and indexing. They are also difficult to work with and can cause plenty of damage due to their poor design.

### **Artstor® Solves Problems**

The ARTSTOR system easily addresses all of these problems. Our vertical suspended design prevents slumping and bending through a combination of gravity and compression.

Flexible, fragile or loose materials are supported throughout each row by our unique linked compartment design. A large variety of sizes allows safe and efficient filing of all types of graphics-related materials.

Our hanging compartments also provide the ultimate in

quality and durability. Manufactured from heavy-duty kraft, they are rated pH neutral to protect delicate materials.

The front opening design allows for easy retrieval and instant visual access to all your work. Additional features include magnified indexes and triple-fold riveted construction. Compartments hold up to 25 pounds of material, making the system an excellent choice for storing film and plates.

The combination of these benefits is the key to our success in solving problems in this market.

### **Effective Visual Indexing**

The heart of a good filing system is indexing. *Oblique's* Color-Keyed Indexing™ makes material retrieval fast and easy. Our unique guide system helps you locate major category breakdowns, while our color accented index labels precisely identify your materials.

ARTSTOR allows you to batch multiple jobs in one compartment and because of the flexibility of our indexing, it adapts to suit each of the major filing methods used:

- Numeric indexing by job number can be processed by computer and easily

Graphic artists and designers get organized with ARTSTOR.

identifies inactive jobs, making purging a snap.

- Alphabetic systems are easy to maintain. Using widely available color-coded yearbands, purging dated materials is simple.
- Customer filing is also easy. Use single compartments to batch small clients and multiple compartments for large clients or complex jobs.

### ***Ultimate Flexibility***

*Oblique*® can be retrofit into virtually any make of steel or wood shelving, even custom-built cabinets. Your ARTSTOR system can, therefore, be stationary, mobile or any other required configuration.

As a professional, you know how important the ability to find and retrieve artwork, negatives, plans and other materials is to your bottom line. Time wasted through searching, or repairing damaged work, diminishes your ability to provide the best service to your customers.

For the very best in organization, speed of retrieval, visual access, protection and space efficiency, choose ARTSTOR by *Oblique* Filing Systems.

# Artstor 40™

- For artwork, negatives, plates or other materials.
- Convenient size (36" W x 24" D x 40" H) fits the smallest of spaces.
- Heavy-duty worktop covered in black PVC.
- Available in two models—for material sizes 14" x 24" and 30" x 24".
- Has the same capacity as 36-2" flat file drawers at a fraction of the cost.
- Workstation filing for small printers, graphic artists and designers.

Artstor 40 units accommodate two standard material sizes.

Safestor is the perfect filing solution for architects and engineers.

Safestor portfolios keep valuable drawings protected and organized.

*Handy work surface and efficient filing system in one compact unit.*

## Printing Industry

ARTSTOR is especially suited to the varied demands of the printing industry.

Tough, heavy-duty compartments easily stand up to the punishment of plate and negative storage. Plus, our Color-Keyed Indexing allows instant access to important artwork and graphic materials.

From franchised quick printers to in-house print shops to large book and newspaper publishers, ARTSTOR has led the way in innovative designs for the storage and retrieval of valuable printing materials.

*ARTSTOR is the top filing system for printshops.*

## Safestor™

Specially designed for architects, engineers, and designers, the Safestor portfolio can handle blueprints, vellums, layouts, maps, negatives and artwork up to 30" x 40" in size.

Our unique design uses Velcro™ fasteners to eliminate slumped or damaged

materials. Safestor portfolios have pre-perforated handle grips and a pre-printed area for project identification and indexing.

Several different sizes are available. Safestor can be used to house and file valuable originals or transport materials from office to client.
